

Have you been infected with the hepatitis B virus?

- Were you born to a mother infected with hepatitis B?
- Were you born in or have you traveled to a country with a high prevalence of hepatitis B?
- Do you live with someone infected with hepatitis B?
- Have you had a sexually transmitted disease?
- Have you had more than one sexual partner?
- Have you injected drugs and/or shared drug-use equipment?
- Have you ever been on hemodialysis?
- Have you been exposed to blood on the job?
- Are you a gay or bisexual man?
- Are you HIV-positive?

If you answered **YES** to any of these, **get tested for hepatitis B.**

The **hepatitis B virus (HBV)** is a contagious and potentially fatal virus that can cause serious liver damage and liver cancer. Most people do not know they are infected until they are tested.

If you **ARE infected**, there is treatment that can stop or slow disease progression.

If you are **NOT infected**, there is a vaccine against HBV.

Have you been infected with the hepatitis B virus?
